

DOCUMENTACIÓN TÉCNICA

Modelo de datos Costa-Go

Documentación oficial del ecosistema web Costa-Go

Versión: 1.0

Actualizado: 21 de agosto de 2026

Fuente: repositorio `main`

1. Principios
2. Dominios
3. Relaciones principales
4. Diagrama editable
5. Migraciones

Este documento describe únicamente funciones verificadas en el código fuente actual. Toda limitación se identifica de forma expresa.

- PostgreSQL es la fuente transaccional.
- PostGIS soporta zonas Polygon/MultiPolygon y validación espacial.
- Los cambios se aplican mediante migraciones idempotentes.
- Entidades históricas se archivan o desactivan cuando corresponde; no se destruyen para ocultarlas.

Dominios

Dominio	Tablas detectadas
account	account_deletion_requests
admin	admin_notifications, admin_permission_overrides, admin_sessions
advertisers	advertisers
advertising	advertising_cash_closures, advertising_events, advertising_invitations, advertising_leads, advertising_orders, advertising_payment_methods, advertising_payments, advertising_plans
affiliate	affiliate_banners
api	api_usage_events
audit	audit_log
biometric	biometric_credentials
campaign	campaign_status_history
collection	collection_point_closure_payments, collection_point_closures, collection_point_payment_accounts, collection_point_settlements, collection_points
collector	collector_assignments
cooperatives	cooperatives
costa	costa_go_payment_accounts
device	device_tokens
driver	driver_approval_notification_settings, driver_approval_reviews, driver_documents, driver_import_batches, driver_import_rows, driver_memberships, driver_offers
drivers	drivers
email	email_verification_codes
fare	fare_route_rules, fare_sectors
favorite	favorite_places
incidents	incidents
membership	membership_cycle_adjustments, membership_cycle_trip_usages, membership_grace_policies, membership_payment_orders, membership_payments, membership_plans, membership_transfer_proofs

Dominio	Tablas detectadas
mobile	Costa-Go · Modelo de datos Costa-Go · Documento controlado v1.0 · Página 0 mobile_account_roles
operational	operational_settings
password	password_reset_tokens
pricing	pricing_versions
push	push_delivery_events
ratings	ratings
scheduled	scheduled_trip_responses
service	service_area_catalog, service_area_role_access, service_area_versions, service_areas, service_zones
support	support_faqs, support_incident_attachments, support_incident_messages
trip	trip_events, trip_live_locations, trip_location_history, trip_messages, trip_stops
trips	trips
user	user_notifications, user_service_area_access
users	users
vehicles	vehicles

Relaciones principales

Usuarios se relacionan con roles de aplicación, conductores, cooperativas y viajes. Los viajes conservan paradas y eventos. Membresías y publicidad separan órdenes, pagos, cierres/conciliaciones y vigencia. Zonas conservan versiones y autorizaciones.

Migraciones

Se detectaron 48 archivos SQL bajo apps/api/migrations . El inventario generado registra 72 tablas. No debe alterarse producción fuera del mecanismo de migraciones.
